

WATER SOFTENERS AND LEAD REMOVAL

Crawford Company offers BrassMaster Water Softeners and PIONEER™ Whole-House Lead Removal Systems for residential and commercial applications. These systems can be installed separately or together by our licensed plumbers.

Public and private water systems commonly have hardness which is often comprised of calcium and magnesium (along with iron). BrassMaster water softeners use the process of "ion exchange" to effectively remove these undesirable minerals resulting in clean, conditioned water.

Lead can enter your drinking water when service lines that contain lead corrode. Pioneer™ Whole-House Lead Removal Systems can successfully remove heavy metals such as lead. It also removes and/or reduces chlorine, chloramine and other harmful contaminants in the water.

What is in your water?

Crawford Company offers complimentary water testing to help select the ideal water treatment equipment for every application. Understanding what is in the water is the first step to creating a personalized water treatment plan.

BENEFITS OF BRASSMASTER WATER SOFTENERS

- Protects plumbing systems by reducing hard water, scale and lime buildup
- Saves energy by reducing scaling - less scaling can improve efficiency of your hot water heater
- Save money by using less detergent - cleaning with soft water requires less detergent to be used
- Soft water reduces spotting on dishes and faucets
- Metered system will only recharge when it needs to based off of water usage
