

Case Study

Super Target

Crawford Division: Welded Fabrication and Commercial HVAC

Client:

Super Target
Davenport, IA

Challenge:

Provide stainless steel materials, HVAC duct work, and dehumidification units based on plans and specifications.

Solution:

Crawford fabricated and installed stainless steel caps and column wraps, HVAC duct work, and installed two new dehumidification units.

Project Summary:

Crawford Company's Welded Fabrication and Commercial HVAC divisions were sub contracted through Conlon Construction Company to provide specific materials and labor for the remodel of Super Target.

The Welded Fabrication Division fabricated 12" stainless steel column wraps. Column wraps are designed for column protection against shopping carts and abrasive wear from customers. Stainless steel wall caps were fabricated to accent the walls used to separate the Target Cafe. Crawford's Commercial HVAC Division installed the column wraps and wall caps.

The Commercial HVAC Division was responsible for removing the existing dehumidification units and installing two new dehumidification units. Along with the duct work that runs to these units. New duct work was installed in the electronics department, and new spiral and square duct work was installed for the fitting rooms.
